

NIROJAN VARATHARAJAN

Cyber Security Undergraduate

☎ 0742896246 ✉ varatharajannirojan04@gmail.com  www.linkedin.com/in/varatharajan-nirojan  De Seram Mawatha, Welivetta Road, Malabe.

ABOUT ME

Cybersecurity undergraduate specializing in penetration testing, vulnerability assessment, malware analysis, reverse engineering, and SOC fundamentals. Experienced in using tools such as Nmap, Burp Suite, Metasploit, Wireshark, MobSF, apktool, SQLMap, Nikto, and x32dbg through academic projects and practical labs. Interested in threat analysis, security testing, and improving organizational security posture. Seeking a cybersecurity internship to apply technical knowledge, gain industry experience, and contribute to real-world security operations.

EDUCATION

BSc (Hons) in Information Technology, specializing in Cyber Security

Sri Lanka Institute of Information Technology, Faculty of Computing

2024 - Present

Relevant coursework: Network Security, Ethical Hacking, Web Application Security, Digital Forensics, Operating Systems, Cryptography

GCE Advanced Level - Physical Science stream

J/Vaddukoddai Hindu College

Chemistry - B

Physics - S

Combined Mathematics - C

General English - C

TECHNICAL SKILLS

- Networking & Security: TCP/IP, Firewalls, IDS/IPS, VPNs
- Penetration Testing: Nmap, Burp Suite, Metasploit, Wireshark, Nessus
- Operating Systems: Linux (Kali, Ubuntu), Windows Server
- Programming/Scripting: Python, Bash, C, C++, SQL, JavaScript
- Cloud & Virtualization: AWS (basic), VMware, VirtualBox
- Vulnerability Scanning: OpenVAS, Nessus, SQLMap, Nikto

PROJECTS

CTF & Web Security Challenges - Solved practical challenges covering web exploitation, cryptography, reverse engineering, IDOR, SQL injection, and broken authentication using TryHackMe and HackTheBox.

Penetration Testing & Security Assessment - Mr. Robot (Tools: Kali Linux, Nmap, Gobuster, Nikto, Hydra, Metasploit, WordPress)

- Conducted scanning, enumeration, brute-force testing, exploitation, reverse shell analysis, and privilege escalation in a controlled lab environment.
- Documented key findings and recommended security improvements including patch management, account lockout, SIEM alerts, and system hardening.

Android Mobile Security & Reverse Engineering – HabitBook APK (Tools: MobSF, apktool, jadx, ADB, LDPlayer, Android Manifest Analysis)

- Analyzed APK structure, permissions, exported components, certificate details, and security weaknesses using static mobile security analysis.
- Demonstrated an educational controlled service injection to explain mobile app tampering risks and recommended secure coding defenses.

Reverse Engineering & Runtime Manipulation – Legacy Game Software (Tools: x32dbg, Windows 10 VM, Static/Dynamic Analysis, Memory Scanning)

- Reverse engineered Chicken Invaders 1 to identify how unprotected legacy software can be modified at runtime.
- Identified missing protections such as anti-debugging, code obfuscation, memory protection, and runtime integrity verification.

Bug Bounty Assessment (Tools: Burp Suite, Nmap, Nikto, OWASP ZAP, SQLMap)

- Identified common web security issues including security misconfiguration, missing cookie flags, broken access control, and information disclosure.
- Prepared professional vulnerability reports with proof of concept, impact analysis, and remediation recommendations.

CERTIFICATIONS

- CompTIA Security+ (in progress)
- Cisco CCNA - Networking Basics
- Introduction to Cybersecurity Tools & Cyberattacks
- Programming in Python - 2. Python Programming
- Introduction to Information Security
- Ethical Hacking Essentials
- Network Defense Essentials
- Network Security

LANGUAGES

- English – Fluent
- Tamil – Native
- Sinhala – Intermediate

SOFT SKILLS

- Creativity
- Critical thinking
- Team Collaboration
- Time management
- Problem Solving
- Decision Making
- Adaptability
